What do patients want?

What do patients want?

- Treatment

  Protect what they have.

  Get back what they've lost.

What do patients want?

- Treatment

  Protect what they have.

  Get back what they've lost.

- Diagnosis and Prognosis

  What can they expect?

  Will their kids be affected?

What do patients want?

- Treatment
- Diagnosis and Prognosis
- And, they want it TODAY!

What do patients want?

- REALISTIC HOPE that they will get these things reasonably soon.

What do patients want?

- REALISTIC HOPE that they will get these things reasonably soon.
- Not if, WHEN.

What do patients want?

- REALISTIC HOPE that they will get these things reasonably soon.
- Not if, WHEN.
- Realistic Hope requires a plan (the roadmap) and a dedicated group of people committed to carrying out that plan.

Ed’s Roadmap

Ed's Roadmap

- Nonprofit, philanthropic culture.

Ed's Roadmap

- Nonprofit, philanthropic culture.
- Share ideas freely.

  Publish quickly, share detailed methodology when asked.

Ed's Roadmap

- Nonprofit, philanthropic culture.
- Share ideas freely.

  Publish quickly, share detailed methodology when asked.

- Leave no one behind.

  Work on lots of different diseases (early and late stages) and lots of different genes at the same time.

Ed's Roadmap

- Reduce waste.

  Grant writing, annual reports, institutional overhead, administrative layers.

Ed's Roadmap

- Reduce waste.

  Grant writing, annual reports, institutional overhead, administrative layers.

- Replace animal models with cultured cells whenever possible.

  Use cells for efficacy, animals for safety.

Ed's Roadmap

- Reduce the cost and improve the sensitivity of genetic tests.

  Find patients who might wish to join trials.

  Find the remaining disease-causing genes.

Ed's Roadmap

- Reduce the cost and improve the sensitivity of genetic tests.

  Find patients who might wish to join trials.

  Find the remaining disease-causing genes.

- Develop philanthropically funded GMP facilities to reduce the costs of therapeutic vectors and cells.

Ed's Roadmap

- Develop reusable gene therapy strategies.

  Especially genome editing methods for large and/or expression-sensitive genes.

Ed's Roadmap

- Develop reusable gene therapy strategies.

  Especially genome editing methods for large and/or expression-sensitive genes.

- Develop cell therapies based upon patient-derived stem cells.

  Reduce the risk of immune rejection.

Ed's Roadmap

- Analyze existing clinical data to determine the best timing and anatomic location for therapy.

Ed's Roadmap

- Analyze existing clinical data to determine the best timing and anatomic location for therapy.
- Focus almost entirely on Phase I-II clinical trials with long but fairly conventional follow-up.

Ed's Roadmap

- Analyze existing clinical data to determine the best timing and anatomic location for therapy.
- Focus almost entirely on Phase I-II clinical trials with long but fairly conventional follow-up.
- Do everything with a sense of URGENCY.

Achievable Goal #1 for Rare Genetic Diseases

Have clinical trials of gene therapy for DOZENS of genes underway at the same time.

Achievable Goal #2 for Rare Genetic Diseases

Reduce the time between the initial discovery of a new disease gene and the first gene therapy trial in human subjects to . . .

< 24 months

Overview of Genetic Testing for Usher Syndrome

Usher Cohort
2204 patients, 1751 families

- William Kimberling
- Sam Jacobson
- Jerry Fishman
- Richard Weleber
- Elias Traboulsi
- Elise Heon
- Byron Lam
- Claes Moller
- Sten Andreasson
- Alex Levin
- Christine Kay
- Raymond Iezzi
- Mina Chung
- Alessandro Iannaccone

Usher Cohort
2204 patients, 1751 families

- 1624 probands screened with an MDPD strategy – 52% positive.
- 35 of the “negative” patients sequenced with whole exome sequencing – 15 positive (42%).
- Suggests that this combination has a 72% sensitivity.

Usher Cohort

2204 patients, 1751 families

- USH2A 575
- MYO7A (1B) 215
- CDH23 (1D) 67
- USH3A 40
- PCDH15 (1F) 28
- USH1C 27
- GPR98 (2C) 9

1000 Consecutive Families

71 with Usher Syndrome

58% positive with MDPD test

77% after exome

- USH2A 33
- MYO7A (1B) 6
- CDH23 (1D) 8
- USH3A 0
- PCDH15 (1F) 1
- USH1C 3
- GPR98 (2C) 4

Why the big focus on philanthropy?

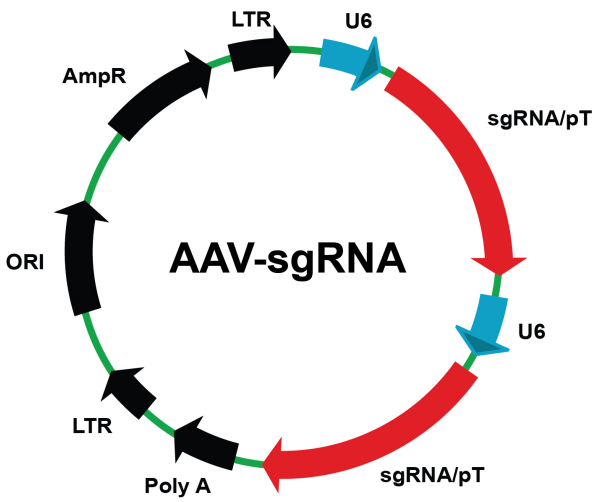
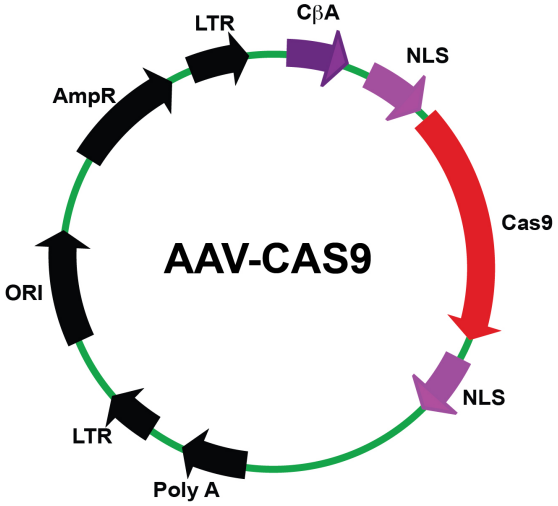
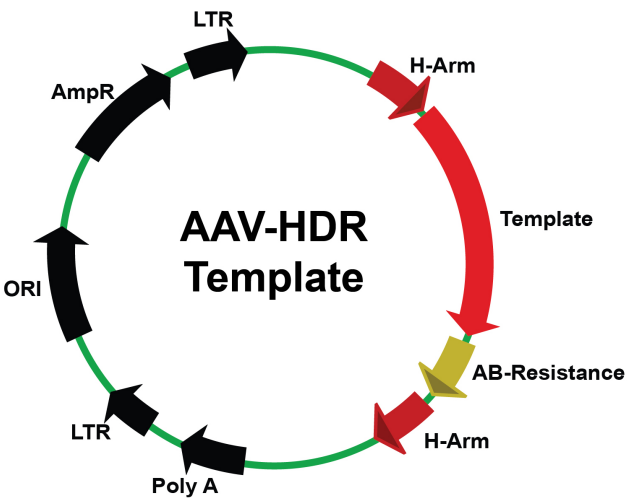
CRISPR-CAS9/HDR for genome editing







Simultaneous delivery of 3 separate AAVs to induce "homologous directed repair" (HDR)

1) Tandem guide RNAs for efficient targeting
2) Mutant Nicking CAS9 for specific cutting
3) Repair template with selection cassette to efficiently select corrected iPSCs
